

CimatronE Viewer

Product Overview

Paper-based revision cycles are long, clumsy and expensive for everyone involved - managers, shop floor, purchasing, and clients - and often delay project progress. To end the revision traffic jam, and ensure that all project stakeholders are working on the same data, Cimatron introduces the eViewer.

The Cimatron eViewer allows viewing, measurement and analysis of CimatronE CAD files - without full CimatronE seat installation - enabling all parties to ensure model accuracy and suitability before costly prototyping begins.

Product Highlights

For managers

- View the most up-to-date data - ensuring that management's finger is always on the pulse of the project
- 20 different measurement functions and a broad range of analysis tools allow rapid feedback to design and other staff

For Purchasing

- Allows purchasing input on automatically generated BOM early in the design phase - saving time and materials later

For Shop Floor

- Keeps shop floor staff in the loop, enabling valuable input from NC and assembly staff

For Clients

- Allows rapid and paper-free revision process. Clients can receive data via email, and view accurate 3D model for interim and final approval.

Key Benefits

- Faster revision cycle means faster delivery of finishing product or prototype
- Lower paper overhead raises profit margins
- More accurate revision process - with all stakeholders working on the same data - raise productivity and lowers human error
